V1.6 March 2017 (D59)

DStv
WiFi Connector

Quick Guide

Model USB3000

**DISCOVER MORE WHEN YOU CONNECT
YOUR DStv EXPLORA TO THE INTERNET**

GETTING CONNECTED

STEP 1

Before installing the DStv WiFi Connector, ensure that your internet router is switched on and connected to the internet.

STEP 2

- Press the blue **DStv** button on your DStv Explora remote
- Scroll to Settings
- Select System Settings
- Select Connectivity Set-up

STEP 3

Connect the cable on the docking station to the USB port on the back of your DStv Explora (if your Explora has a USB port on the side, don't use that one).

Insert the DStv WiFi Connector into the docking station and place the docking station next to the decoder.

The DStv WiFi Connector can also be connected directly to the USB port on the back of your decoder, however this may impact signal reception.

The LED on the DStv WiFi Connector should now be solid white (confirming that it has power).

STEP 4

The DStv Explora will now automatically search for WiFi networks and display the available options. Press **OK** on the remote to select your WiFi network, then press **OK** again to connect the DStv Explora to your WiFi network.

If your WiFi network is not found, move the docking station to a position where it is most likely to receive a WiFi signal.

If your WiFi network is still not found, check that your router is switched on and connected to the internet.

STEP 5

If your WiFi network has a password, enter the password now.

STEP 6

The DStv Explora will now automatically test connectivity to the internet.

YOU'RE NOW READY TO DISCOVER & ENJOY EVEN MORE ENTERTAINMENT ON YOUR DStv EXPLORA!

QUICK TIPS

If the name of your WiFi network changes, or the password is reset or you need to check the connectivity of your DStv WiFi Connector, simply repeat Step 2.

Scan this QR code to see a video with step-by-step instructions on how to connect your DStv WiFi Connector to the DStv Explora.
